

PSE Up & Go Electric for Public – Pole Charging

PSE is partnering with local communities to ensure all residents have access to easy, convenient electric vehicle charging near where they live, work and play.

What is pole charging?

Pole-mounted chargers are attached to curbside streetlights and utility poles, increasing the number of locations where they can be installed.

Retractable cords – lowered upon payment – keep chargers out of the way of pedestrians but still easily accessible for electric vehicle drivers.

These Level 2 chargers can add 10 to 25 miles of range to an EV battery per hour of charging.

Go electric with confidence

Pole-mounted chargers can give drivers confidence in their ability to switch to an electric vehicle.

Access to charging for drivers living in **apartments** or **condos**

Convenient locations near **businesses, parks** and **libraries**

Ability to charge while **shopping** or **running errands** at local businesses

We want to hear from you!

Help PSE plan this new network of public chargers by telling us where you want to see pole charging.
